

# Disease Research

For most systems that we study we will do a medical research project. This project will consist of a **one and a half page** typed report that is **double-spaced**, and typed in either **Times New Roman** font size **12**, or **Calibri** font size **11**.

## You need include:

- The name of the condition
- Symptoms
- What type of doctor would treat it
- Medications to cure the condition
- What causes the condition
- How people contract the condition
- How many people are affected per year
- How many deaths per year
- At least one picture (Picture(s) could be placed on the 2<sup>nd</sup> half of the 2<sup>nd</sup> page)

You will have some time in class to research your disease or condition. Each paper will be worth a **lab grade** of 20 pts. We may also report our findings to the class if time permits. When we do presentations they will be worth an additional **10 lab points**.

Be very thorough in your research and make sure each of you do a different disease or condition if there are enough to choose from. If you know of a disease that you would like to do your paper on and it is not on the list to choose from let me know.
